high demand design services

CA Design is in high demand by government agencies and semiconductor companies for the versatility of our design program. We are structured to comprehensively encompass the entire design and manufacturing process. We work with you to ensure a design that meets all of your requirements, including documentation, production, assembly and test.

“My company has used the design services of CA Design for several years and we couldn’t be happier with the arrangement. They’re first-rate, they’re cost-effective and they are timely.”

— Bill Butler

Our highly specialized senior designers are trained in a variety of design specialties, including:

- OrCAD
- Pads Power PCB
- Cadence Allegro
- Protel
- Specctra Autorouter

We utilize our expertise in these design mediums to produce a wide range of boards — Large Digital Boards, Small RF boards, High Speed, Chip on Board and Micro via Designs.

on-site design training

CA Design provides on-site customized design training for government agencies and semiconductor companies. Our instructors will come to your site for one week to conduct the training process, enabling your firm or agency to maintain its standards of confidentiality and security. We can also provide training classes at our facility.

We will train your engineers to become proficient in OrCAD and Cadence Allegro — able to build any part they might need and place, route, and document any board they require.

With CA Design’s intensive training, our expertise becomes your expertise.

This intensive training will enable your agency or company to enhance your engineers’ capabilities and streamline your operations.

Upon completion of the design training, CA Design provides follow-up support your engineers may need via email or telephone.

Not only is CA Design’s training the best in the business, our support is also top-notch and highly recommended.

unique services unique results

The best acknowledgement of the quality of our work is the fact that over half of our new assignments come from existing clients and referrals.

CA Design was founded in 1988 by Bob Chandler as a high-quality, cost-effective source for companies seeking Printed Circuit Design, Training, Fabrication, and Project Management.

Specializing in various software platforms such as OrCAD, PADS Powerpcb, Cadence Allegro, Specctra and Protel — our designers work from either your office or our office to provide you with design databases that meet your specifications.

As the demand for CA Design’s services has grown, so has our roster of talented designers. Today, we have designers across the country who interface with various government agencies and semiconductor clients to provide them with quality design solutions.

If you are in need of highly specialized design, then you will want to utilize the proven services of CA Design. Contact us for pricing and schedule, carolle@cadesign.net or call (408) 226-1447 or (408) 226-1329.

“Taught to Designers... by Designers.”
